FACIT CA2-16

The FACIT CA2-16, engineered to perfection, is designed to solve complex problems with extraordinary ease and simplicity. The black keys alone enable you to perform all arithmetic operations fully automatically. To make figure work even simpler, Facit CA2-16 comes with a host of special labour-savers. For example, numbers can be back-transferred from both the product and multiplier registers, saving setting up a partial result every time in a long sequence of operations. The back-transfer feature also guards against mistakes in re-entering numbers. Facit CA2-16 lets you accumulate numbers positively or negatively, eliminating decimals when working with large numbers. You can also obtain a 16 digit result. The calculating mechanism does more than 400 revolutions per minute and automatically selects the shortest multiplication methods, resulting in extra time-saving of 40 %.

FACIT CA2-16

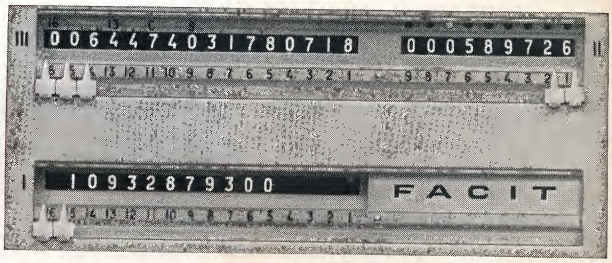
- Pre-checking of set-up numbers
- Facility for post-checking of set-up numbers
- Direct back-transfer from product and multiplier registers
- Cumulative mechanism for subproducts and sub-totals
- Fully automatic shortcut multiplication
- Squares, cubes and works out higher powers of numbers automatically
- Fully automatic division
- Optional further processing of results without need for prior programming
- Optional automatic elimination of figures (decimals) for increased capacity
- Logical colour scheme and grouping of keys
- Figure capacity: 11 (key board reg.) × 9 (multiplier reg.) × 16 (product reg.)

SERVICE

Prompt professional service is near at hand for all Facit owners. Well trained servicemen see to it that every machine is properly cared for.

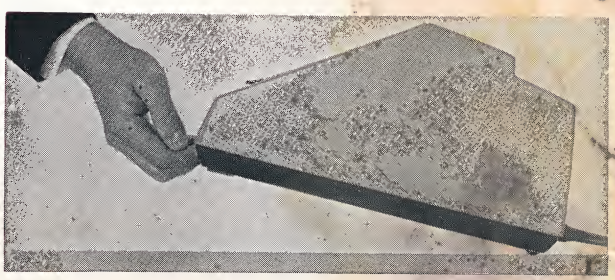
FACIT

manufactures calculators, adding machines, electronic equipment, typewriters, duplicators and office furniture. Countries of manufacture are Sweden, West Germany, Turkey, India, Argentina, Brazil, Colombia and Mexico. Sales in 130 countries.

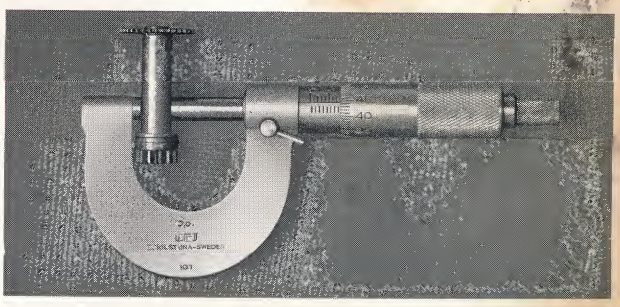


The three registers are easy to read and show distinct figures. Set-up numbers can always be **pre-checked.** The plastic decimal indicators are movable.

Facit CA2-16 automatically selects the shortest way in multiplication. This is because the rotor alternates between plus and minus turns, starting from zero. Thus the rotor never has to make more than 5 turns in either direction. This shortcut feature effects time saving of 40 % and reduces machine wear and tear.



Facit CA2-16 "moves on wheels", that is, it is easy to move around on the desk and doesn't take up much space. The absence of a moving carriage saves working space even more. Facit CA2-16 is also fully sealed in to shut out dust.



Facit calculators are famous for their reliability and long service life. This is the results of high quality and great precision — some parts have tolerances of only 0.02 mm.
